PushingBox setup guide:

1. Create a spreadsheet on Google Drive..
2. In that spreadsheet create a script (Tools -> Script Editor).
3. Write your script code into that script file, you can also copy the code on our Github to it.
4. Deploy the script as a web app (Publish -> Deploy as web app…).
5. Copy the URL of the script and save it for PushingBox.
6. Create an account on PushingBox (https://www.pushingbox.com)
7. Create a service in PushingBox, the service type will be "CustomURL".
8. Paste in the URL of the script.
9. Create a scenario and include the data you want to accept, what we're using:
   ?IDtag=$IDtag$&TimeStamp=$TimeStamp$&TempC=$TempC$&Humid=$Humid$&LoadCell=$LoadCell$&IRLight=$IRLight$&FullLight=$FullLight$&BatVolt=$BatVolt$&RSSI=$RSSI$

10. Attach that scenario to the service you created and PushingBox is setup.
